1. This action is in response to the amendment that was received on October 12, 2004 and the RCE received on December 3, 2004. Claims 1-6, 11 and 14-15 are pending.

2. The following is an examiner's statement of reasons for allowance:

Patel et al describe that it is known to place PCI units into a deep sleep state by asserting an active low reset signal on the PCI bus at column 2, lines 3-11.

The claimed invention is allowable over the art of record because the art of record does not teach or suggest a method or apparatus for transitioning a processor having a plurality of power state conditions comprising a processor having selectable operating modes, a north-bridge controller initiating a processor reset signal, a south-bridge controller, a clock, a power supply and logic connected to the above elements that provides control signals to the processor to cause a deep sleep transition to the processor immediately after reset as claimed in independent claims 1 and 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dennis M. Butler whose telephone number is 571-272-
